Prof. Piccard's FlatEarth-Entdeckung

Gastbeitrag von Sonja M

Das ist seine Geschichte, die in unserem Bildungssystem ausgelassen wurde.

Die Fragen zur Thematik „Flache Erde“ finden immer wieder neue interessante Nachforschungsergebnisse; so entdeckte Prof. Auguste Piccard auf einer Ballonfahrt in die Stratosphäre in 1931 in einer Höhe von über 16 Km, **dass die Erde flach sei und am Rand wie aufgestülpt mit Rand aussehe** (Antarktik).

https://de.wikipedia.org/wiki/Auguste_Piccard

In 1931 Professor Auguste Piccard / Swiss Physicist, Inventor & Explorer took the first ever balloon flight high above the Earth to the stratosphere and discovered **a flat plane with upturned edges**. In his Pressurised aluminium gondola he reached 51.775 feet about 10 miles above the Earth.

This is his story, a story which has been omitted from our education system.

A **professor** from **Germany**. Instead of a basket, it trailed an air-tight black-and-silver aluminum ball. Within Prof. Auguste Piccard, physicist, and Charles Kipfer aimed to explore the air 50,000 feet up. Seventeen hours later, after being given up for dead, they returned safely from an estimated height of more than 52,000 feet, almost ten miles, shattering every aircraft altitude record. Oxygen tanks kept them alive while they made observations. Records of their instruments are now being checked and interpreted. First to rise safely into the upper layer of the earth's atmosphere, they found the air pressure at ten miles altitude so low — one-tenth of that at sea level—that a man exposed to it would perish much as a deep-sea fish bursts of its own internal pressure when brought to the earth's surface. Piccard and his aid found cosmic rays, mysterious radiations from outer space, far more powerful than at the earth's surface, and gaged their intensity. The explorers trapped samples of the upper air, "blue air," as Piccard reported it to appear, in cylinders. Analysis may prove it exceptionally rich in ozone, the intensely blue gas supposedly

The huge balloon, carrying the big ball in which ride the two scientists, begins its ascent. The metal chamber was designed to save the explorers' lives at altitude never before reached.

responsible for the Heaviside layer or "radio roof." The story of their adventure surpasses fiction. During the ascent, the aluminum ball began to leak. They plugged it desperately with vaseline and cotton waste, stopping the leak. In the first half hour the balloon shot upward nine miles. Through portholes, the observers saw the earth through copper-colored, then bluish, haze. It seemed a flat disk with upturned edge. At the ten-mile level the sky appeared a deep, dark blue. With observations complete, the observers tried to descend, but couldn't. While their oxygen tanks emptied, they floated aimlessly over Germany, Austria, and Italy. Cool evening air contracted the balloon's gas and brought them down on a glacier near Ober-Gurgl, Austria, with one hour's supply of oxygen to spare.

Professor Piccard, center, seated within the ball, studies the instruments before the daring ascent. Above, dismantling balloon on the high glacier.

Insgesamt sind das hoch-interessante Themen, u.a. mit ernst zu nehmenden Warnungen, die natürlich zu vielerlei Spekulationen führen können und sollen; denn wir alle erwarten ja so etwas schon seit einiger Zeit, wird es nun auf uns losgelassen bzw. wird nun etwas weltveränderndes eingeläutet?
